

# ESM (Enterprise Spreadsheet Manager)

ClusterSeven ESM provides one central platform for the management of business-critical spreadsheets. ESM also offers an integrated dashboard for users of ClusterSeven ADM (Access® Database Manager) for unified control of all of your end user computing.

ESM supports the complete spreadsheet management lifecycle:

- Understanding your current state (eDiscovery and Risk Assessment)
- Applying a control framework (Security, Monitoring and Alerting)
- Spreadsheet Retirement and Replacement with more Robust Systems
- Enhanced productivity and insights into historical data

The **File Watchers** locate EUCs and monitor user activity without requiring any software agents on servers or in files.

The **Application Server(s)** analyse user activity, generating exception reports and email alerts for a rapid targeted response to anomalous behaviour.

The **User Interface** provides personalized dashboards that can be drilled down from inventory oversight all the way to potential problem cells for approval or repair.

The **Database** provides a cell-level data-warehouse allowing all historical activity to be 'sliced and diced' to your needs for new business insight.

Adopting ClusterSeven opens the door to a wide range of benefits that will take you way beyond your expectations of a control solution. Contact us at [inquiries@clusterseven.com](mailto:inquiries@clusterseven.com) or the telephone numbers below to get started.

- Did you know that you can...
- Monitor activity across multiple sites from one installation for the lowest support costs
  - Map data dependencies by 'spidering' down spreadsheet links (in macros, cell formulas, cell text, named ranges and data sources)
  - Automatically track file changes even when users change folder and file names
  - Create your own risk rules to run at speed across your whole file inventory
  - Automatically reconcile data between separate sources in spreadsheets and/or systems, saving days of manual effort
  - Integrate ClusterSeven information into third party dashboards such as IBM Cognos for an easier daily life
  - Be alerted in real-time on things that don't happen when they should – as well as things that do happen when they shouldn't
- Still unsure... try out our software on the cloud (SaaS) to see how we can solve your problems.
